

Business Analysis for Warehouse

Improve your decision making with business analysis for warehouse

Today's warehouse professionals are tasked with gathering and analyzing often complex and widely dispersed data to identify trends and make the best decisions. Even more important than gathering and understanding the data is being able to turn that information into meaningful insights that drive results.

Business analysis for warehouse is a comprehensive analysis tool that helps executives, managers and warehouse employees to identify key trends and opportunities, plan effectively, configure dashboards and take action. Business analysis for warehouse raises the performance of business intelligence in the warehouse from simple reporting and aggregation of data to providing actionable data analysis for key stakeholders.

Why go at it alone? Rely on Blue Yonder, the industry leader

Presenting the right data to appropriate users empowers them to more knowledgeably analyze operations to spot trends, drill down to discover the root cause of problems and make better decisions. This can result in reduced labor costs and greater warehouse efficiency. By empowering all users with role-specific views of the data, there is no need to engage the IT department. Business analysis for warehouse increases the benefits and value of your investment in Blue Yonder's warehouse management and labor management solutions.

Business analysis for warehouse enables users to analyze a variety of performance metrics and historical information trends to give management a better, more detailed understanding of performance from corporate level all the way to the warehouse floor. Plus, regular data updates allow users to leverage the analytical tool to make quick course corrections, an oftentimes necessary action in today's rapidly evolving market.

Analysis capabilities within easy reach

Business analysis for warehouse users can expect an agile user experience with configurable dashboards. Cognos-based configurable dashboards allow users to extract data that suits their business requirements on the device of their choice. Add personalized filters and layout content with drag and drop functionality. Enable global filtering to pull just the data needed for each analysis. Change the report presentation for maximum efficiency and effectiveness.

Users can also experience in-the-moment insights via mobile capabilities. Online and offline mobile access is supported for multiple platforms, including Apple, iPad, iPhone and Android. Interactive content enables drilling, filtering, and sorting with multiple dashboards and tabs. Business analysis for warehouse also pulls the most pertinent information to build data cubes and present them to users on demand, without degrading system performance.

Connect and visualize data in minutes, identify key trends and opportunities, and make the best decisions for your organization with business analysis for warehouse.
